MLB GENERATOR application

Beitrag von „al6042“ vom 11. Februar 2017, 13:33

In Clover you have to use the following terminal command:

Code

1. `sudo nvram -c`

Then deleted the nvram.plist you showed us above and the reboot.

A simple NVRAM-Reset might not help if you have issues with iMessage and/or Facetime. You might also have to delete a couple of currently used iMessage/Facetime settings files.

Google for "reset iMessage on mac"
