Gigabyte Z77N-Wifi mit Ozmosis - HDMI-Audio wie zum Laufen bekommen?

Beitrag von „kramer2k“ vom 15. Februar 2017, 15:55

Updated DSDT.

Had issues with external 3.5" USB drives being identified as Internal Drives.

Changed

1) EHC1 / EHC2 --> EH01 / EH02 per RehabMan

2) Under _DSM for EH01/EH02/XHC, last line before DTGP modified to

"built-in",

Buffer (One)

{

0x01

USB drives now identified as External..woot!

Speedstepping 3570k SSDT also attached if anyone is interested.
