macOS Sierra on Asus N73SV Clover bootloader Legacy

Beitrag von „sygey“ vom 19. Februar 2017, 10:04

Hi griven! I did what you said, i set a administrator password in bios, but nothing changed.

when I bout this notebook it has another version of bios but I made update, I was wondering that, maybe with original settings it will show up CSM. I tried yesterday to downgrade but the winflash utility doesn't let me do it because it says its a older version bios then current.

I red on some forum that another people hu had a similar problem, managed to unhide the settings in bios with some AMI tools, bot I don't find any ami tool.

I made some pictures with mi current bios.

I succeded to downgrade the bios, but no changes. Also find the AMIBCP 4.53 tool and opened the bios file to se if there its an hidden option but the,s no option just wat it,s in original bios show up.

maybe its not support UEFI boot! or maybe it Boots UEFI just from CD DVD rom. I have no dvd rom because it got broked, and I never by another one

I will try to instal UEFI directly on Hardrive from my desktop Rack and just plug back the UEFI installed Hard drive.
