## HELP ME - Asus Z87-K

**Beitrag von „griven“ vom 19. Februar 2017, 16:46**

Even if this thread is closed right now I´d like to leave a brief note how to solve the mentioned Issue.

ASUS Mainboards won't permit a flash of modified ROM´s via EZ Flash or EZ Update since the modification breaks the Checksum of the ROM File. To flash it anyway copy the file to a USB Stick (FAT Format) and connect this USB Stick to your PC. If you turn the PC on it will automatically recognise the [Bios Update](#) on the USB Drive and start the flashing process (all of this is actually described in your Mainboards User Guide as well just read the section about ASUS Crash Free Bios).
