Please try this Bios 😊

I've also put a patched DSDT.aml into that folder, so you can try loading this using your EFI partition (EFI/Oz/Acpi/Load). This Bios already has sound drivers built into it! Please let me know, whether the (and the DSDT as well) works, so I can put it into our Download Centre.

Have a nice weekend!

thank you, I tried this bios, it can boot 10.11 but can not boot 10.12(schedule bar), bios setting i disable the 'vt-d' and 'CFG Lock', I do not know what else to set up. if use this dsdt.aml, the 10.11 can not boot yet.
