## OZMOSIS REQUEST THREAD / Ozmosis Anfragen [1. Beitrag beachten!]

Beitrag von „chohsiao“ vom 27. März 2017, 14:49

[Zitat von Fredde2209](#)

You probably have your own Defaults.plist on the EFI partition right? But the old ones always had the smbios macpro 3.1 which is no longer compatible with macOS Sierra. So you need to change the smbios to iMac 14.X or so and then OT should be able to start Sierra as well 😊

Concerning the dsdt file, could you try to boot in verbose mode and send me a picture of the last error?

the ozmosisdefaults i changed and it can be running.  
Concerning the dsdt file, this is the picture of the last error, thank you.
