Please help me create a DSDT for MSI Z97 GAMING 3

Beitrag von „al6042“ vom 30. März 2017, 07:42

Your welcome... 😊

Please do us all a favor and add your hardware details either in your signature or your profile, under the section "About me".

And please make sure you have the USBInjectAll.kext on your EFI-Partition under /EFI/CLOVER/kexts/Other, where all the other kexts like FakeSMC should reside.

Also check if in your config.plist the following KextsToPatch entry is added:

Comment change 15 port limit to 26 in XHCI kext

Name AppleUSBXHCIPCI

Find 83bd74ffffff10

Replace 83bd74ffffff1b

With that all available USB Ports should be available and usable.
