OZMOSIS REQUEST THREAD / Ozmosis Anfragen [1. Beitrag beachten!]

Beitrag von „Zhaman“ vom 10. April 2017, 17:20

Good day, gentlemen! Faced such a nasty problem! Previously, everything was fine until I updated my macOS to 10.12.4. I installed the system from scratch (formatted the hard disk). After installation, I mounted my EFI partition, but there is no Oz folder. BIOS flashing and reset NVRAM do not give anything, creating this folder independently and copying all the files in this folder does not give anything. Which day already I fight. Help!!!
