# Ozmosis can not load any files in the Oz directory

Beitrag von „xlazy.xyz“ vom 15. April 2017, 14:03

[Zitat von griven](#)

It's not enough to simply extract the ffs file and rename it. Use UEFITool and extract the Body of its raw section just like that:

Thanks! I will learn and try it. Now I want to load DSDT to drive my sound card. Use Clover boot, add AppleALC.kext and CodecCommander.kext in the EFI directory, and then set Audio Inject = 1, the sound card can be used normally. But I found that I could not load anything in the Oz directory. How can i solve this trouble?Could you help me ?Please !
