

Erledigt R9 390 Unter Sierra

Beitrag von „ralf.“ vom 19. April 2017, 15:42

Das ist viel zu umständlich/unübersichtlich. Mache es so

```
<string>com.apple.AMDRadeonX4000</string>
<key>GpuDebugPolicy</key>
<integer>0</integer>
<key>IOClass</key>
<string>AMDHawaiiGraphicsAccelerator</string>
<key>IODVDBundleName</key>
<string>AMDRadeonVADriver</string>
<key>IOKitDebug</key>
<integer>0</integer>
<key>IOMatchCategory</key>
<string>IOAccelerator</string>
<key>IOPCIMatch</key>
<string>0x67B11002</string>
```

```
<string>AMD8000Controller</string>
<key>IOMatchCategory</key>
<string>IOFramebuffer</string>
<key>IOName</key>
<string>AMD8000Controller</string>
<key>IOPCIMatch</key>
<string>0x67B11002 0x46001002 0x66401002
0x665C1002 0x665D1002 0x67B01002</string>
```

Danach einmal Kext Utility durchlaufen lassen.
