Currently the best alternative of the new Macbook PRO

Beitrag von „danielmain“ vom 4. Mai 2017, 21:56

Hello, do you know what is right now the best alternative of the new Macbook PRO 2016 that is at the same time **near 100% compatible with Hackintosh Sierra?**

- Money is not the problem. I just want the freedom to be able to open the Laptop and upgrade disks or rams.
- Preferable up to 32 GB Ram.
- No just Full HD, I need a descent Screen like a Retina (+2560x1440 in a 13").
- Portable as the Macbook PRO 13 (similar dimensions and weight)
