OS X El Capitan (český verze)

Beitrag von „griven“ vom 25. Mai 2017, 15:58

I think so.

The files in the EFI Partition/Folder control the behaviour of Clover and contain all necessary drivers to load and install OS-X on your Hardware. Simply install clover on your USB Drive (do not check the option to install for UEFI Motherboards) and afterwards replace the EFI Folder with the one [@ralf.](#) provided and try to boot and install.
