Hello! I would like to request ozmosis mod for Sierra. Thank you in advance!

1. Manufacturer: MSI
2. Model: H97M-G43
3. Chipset: H97
4. Bios version: 2.B
5. Bios link: http://download.msi.com/bos_exe/7924v2B.zip

Here you go 😊 Please let me know, how it works, so that I can add it to our download section. I also patched the DSDT.aml for you, so you can try whether that one works. Your Bios already has the newest Ethernet and Sound drivers built-in, so you don't need to worry about these things. It should just work Out Of the Box. Good luck!

Thank you!

The problem is that I can't even start the installation of Sierra. If I boot from usb I see the Apple logo for a second then it restarts instantly.

In my older board GA-Z87X-UD3H with Ozmosis mod from this site I was able to install Sierra. Switching the SSD to the MSI board it can boot Sierra.
Any help?
