Hello!

I finally found out how to install Sierra on my MSI board successfully. I made a patched bios with ozmtool. Than I switched back to yours and it works, too. It crashes on the first boot, but boots after restart.

But the integrated sound and network drivers don't work. I fixed the network putting the kext to the EFI oz folder, but can't get the sound working.

If I put your DSDT.aml to the efi folder, it doesn't even start. I have to delete it and reset nvram to make it work again.

See the attachment.
