Erledigt Ozmosis-Package for MacOS Sierra

I'm sorry if this is the wrong place to post this (it almost definitely is), but I do have a problem related to the guide; when I flashed my BIOS using one of the provided files from here, Ozmosis seems to have installed into the EFI partition of my secondary drive, not the one I use to boot MacOS. This obviously doesn't leave me with an unbootable machine, but it means that for instance I can't install audio drivers. Is there a way to manually change what EFI partition Ozmosis uses?
