10.13. High Sierra mit Ozmosis

Beitrag von „nikoZ“ vom 10. Juni 2017, 22:47

Sorry if im a little offtopic but wich argument do I have to use in Defaults.plist for Sierra to remember permanently to use WebDrv for my GTX 1060. I tried -nvda_drv=1 but its not working and after every PRAM reset I have to go over systepreferences and activate Webdrv. Thanks.
