10.13. High Sierra mit Ozmosis

Beitrag von „nikoZ“ vom 10. Juni 2017, 23:37

Thank you al6042!

EDIT:

cecekpawon@insanelymac forum says:

One important thing about ozmosis and MATS ACPI Tables dropping i saw over Insanelymac forum

Zitat

Friend of ours recently did some research regarding "MATS" table [here](#). In my case, by changing (bad) "Asl Compiler ID" to "INTL"& recompiling, it doesnt produce evil "0x98" byte as mentioned.

```
[000h 0000 4] Signature : "MATS"  
[004h 0004 4] Table Length : 00000024  
[008h 0008 1] Revision : 02  
[009h 0009 1] Checksum : 45  
[00Ah 0010 6] Oem ID : "ALASKA"  
[010h 0016 8] Oem Table ID : "A M I"  
[018h 0024 4] Oem Revision : 00000002  
[01Ch 0028 4] Asl Compiler ID : "INTL"  
[020h 0032 4] Asl Compiler Revision : 20140926
```

Alles anzeigen

Then he replied to me

"Dump your MATS.aml, modify "Asl Compiler ID". Compile & put in "Oz\Acpi\Load" folder to test if it work."

I don't really know how to do that properly. As far as i know oz has a acpi dump module by setting 0x45 but then its all i can do.
