10.13. High Sierra mit Ozmosis

Beitrag von „griven“ vom 11. Juni 2017, 22:13

I need to do more testing since there are quite a few pretty nasty problems...

If I place any Kext into /Efi/Oz/Darwin/Extensions the system refuses to boot all you get is a Black Screen and that's it. Seem like OZ won't pick up Extensions placed there...
