Ozmosis problem with ASUS H97M-E and macOS Sierra

Beitrag von „Limman“ vom 13. Juni 2017, 14:34

Hello.

Some time ago I flashed bios and installed El Capitan 10.11.5.

I used this bios [Mod for H97M-E-2702](#) and changed serials and mac model to iMac15,1. It works great. Update 10.11.6 installed successfully.

Now I am trying to install macOS Sierra 10.12.5 (clean installation on new disk) and get error "**busy timeout[0], (240s), kextd wait(0): 'AppleACPICPU'**". On 10.12.4 the same problem. Is it possible to fix?
