# El Capitan auf dem T61? Ja aber sicher doch!

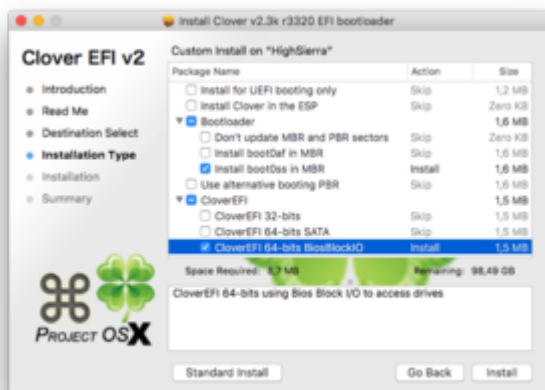

Beitrag von „griven“ vom 19. Juni 2017, 22:50

Hi pretty everything you need is linked in this thread but I'll add it again below so you're good to go 😁

There are a few things you have to take care of before you start first of all make sure that all [bios Settings](#) are correct.

1. Security -> Disable Secure Chip  
Security -> Enable protected Memory
2. SATA -> AHCI

Second prepare your installer the best way to do it is the CreateInstallMedium Command in Terminal if you're not familiar with terminal Usage you may also use DiskmakerX. After the installer is ready go ahead and install Clover ([Clover v2.3k r3320.pkg.zip](#)) as target select your Installer Medium and tick the install Options like this:

Once done you'll find a directory called EFI inside the root folder of your installer go ahead and open it in Finder. Copy this [config.plist](#) into the Clover folder (just replace the example) and this [DSDT.aml](#) into /Efi/Clover/Acpi/Patched. The last thing to do is copy all the extensions from [T61 Kext.zip](#) into /Efi/Clover/Kexts/other and that's it. If you prepared your Installer correctly you are ready to install ElCapitan on your T61. Have fun 😁
