Hi,

thats very useful to know about the GFX0 and therefore i can ignore this entry. I made a screenshot of the XPS DSDT with the part defining the ATI (original card), i think anyway, and also a part from one ACER DSDT where i guess is the MXM entry, see attached. I still cant figure out what the code means, i cant find any good documentation to that, but i think that replacing the VGA device/entry while keeping the LCDD could be a good way to go. Well, anyone? 😊

here some info about the MXM slot: [https://en.wikipedia.org/wiki/Mobile\\_PCI\\_Express\\_Module](https://en.wikipedia.org/wiki/Mobile_PCI_Express_Module)

Thank you for the link,,, i think its a good way how to test the custom DSDT afterwards.
