# Lenovo E560 - Clover - EL Capitan

Beitrag von „iPhoneTruth“ vom 29. August 2017, 10:33

I have followed the installation guides here in this forum. Sorry, they are in German. Perhaps you will find some in English in the Internet, f.e. in youtube.

I had changed the SMBIOS serial from the config.plist in CLOVER.zip for you. So you can use this one.

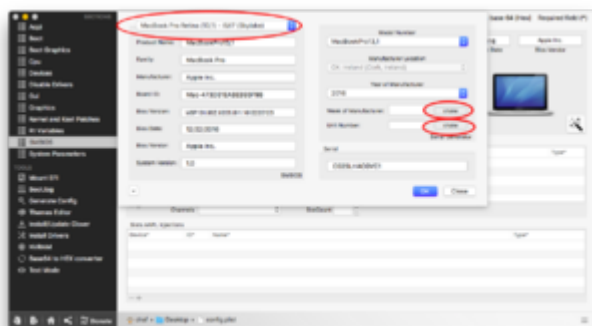

For generating an new SMBIOS serial you have to select the config.plist and open it with Clover Configurator. Then got to SMBIOS and push the icon on the right side.

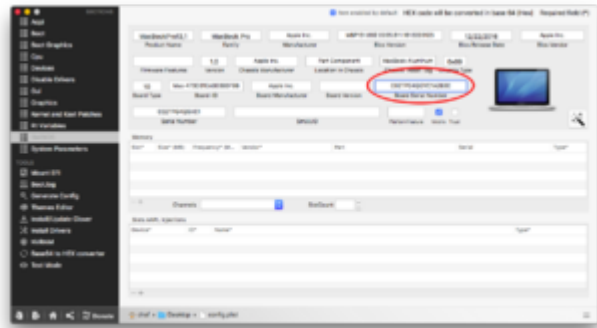

Select now the second icon (not the first one).

Select "MacBook Pro Retina (13,1) - I5/I7 (Skylake)", then push some times on the two buttons "shake" and then click "Ok".

Now you have your own SMBIOS serial, for example "C02TPG4QGVC1". Copy this serialnumber and put it in the field "Board Serial Number" by adding 5 Letters or Numbers. Normaly we will add A2B3C or somthing like this. The serialnumber in "Board Serial Number" ist now "C02TPG4QGVC1A2B3C".

Copy this, got to RT Variables and there to MLB and insert this in the field "MLB".

Thats it.
