No, I dont find the secret keyboard shortcut for Advanced [BIOS settings](#). If you will find it, pleas tell me.

Yes, there are two Wireless/Bluetooth-Combo cards, witch works great with our laptop and macOS Sierra: Broadcom BCM94352HBM and Broadcom BCM943602BAED (= DW1830). Both had the NGFF-Faktor witch is necessary. No other card will work with macOS. But one issue is there: After Sleep Wifi wont work on my laptop.
