@griven Hello,here's my hardwares information

_____

motherboard:GA Z77P-d3 rev1.1
cpu:E3 1270
gpu:gtx1050ti
SSD:Liteon T10 NVME 240G

_____

I know there's a mod for z77 made by you and it supports macOS sierra.But I only have a nvme ssd.I know using clover can install on a nvme ssd by using "KextToPatch".
Here's my problem:I've heard that there is a patcher called "kextPatcher" for ozmosis.By using it,we can patch the ionvmefamily by using the patches of rehabman,theoretically.
I tried,but failed at inserting the kextpatcher.ffs into the mod bios.MMtools says ffs file with same GUID exists in Firmware volume.I checked,and found that the GUID of the kextpatcher.ffs and hfsplus.ffs are the same.

_____

So,could you tell me how to solve this?
I'd be appreciate if you patch nvme for the z77p-d3 bios you've made for sierra.
Anyway,thanks.
