[@griven](#) thanks for your reply

I found a kernnextpatcher in your rom it is for nvme  
in macOS high sierra, we can install on a nvme ssd without patches.  
But there's no webdriver released for 10.13 yet.  
So i just can install 10.12.6 for making my 1050ti work

what's more ,I can't insert nvmeExpress.dxe into this rom,it says no enough rom volume.  
Anyway,thanks for your hardwork!

Now I know that kernnextpatcher has the same function of kexttopatch.  
But how do I edit the kernnextPatcher.plist to add rehabman's nvme code?  
And where is the kernelPatcher.plist?  
I've flashed the rom you offered,and tried place the kernnextPatcher.plist I made to root of EFI.  
But still no nvme partition in the installing process.
