[@griven](#) thanks for your reply

I found a kernextpatcher in your rom it is for nvme
in macOS high sierra, we can install on a nvme ssd without patches.
But there's no webdriver released for 10.13 yet.
So i just can install 10.12.6 for making my 1050ti work

what's more ,I can't insert nvmeExpress.dxe into this rom,it says no enough rom volume.
Anyway,thanks for your hardwork!

Now I know that kernextpatcher has the same function of kexttopatch.
But how do I edit the kernextPatcher.plist to add rehabman's nvme code?
And where is the kernelPatcher.plist?
I've flashed the rom you offered,and tried place the kernextPatcher.plist I made to root of EFI.
But still no nvme partition in the installing process.
