Überlegung: Xiaomi Air Notebook hackbook fähig?

Beitrag von „danny1919“ vom 22. September 2017, 20:14

Hey guys!

I have xiaomi 13.3, 2017 model with Kaby LAke and 150MX.
Trying to get Sierra running on it.

Anyway I Took kexts from 10.13, from this post:

<https://www.censoredwordtodiff...chments/10-13-zip.277290/>

(tony + mac86)

Now, I can boot to installer, but it does not recognize NVMe SSD. Heard that patching from RehabMan helps but I dont have spare mac or hac to test that.
