`Erledigt` There is no second installation process and no object mac partition built as well

Beitrag von „puppy915" vom 28. September 2017, 11:29

Here is my hardware information
Motherboard GA-Z77P-D3 REV1.1 (Using @griven's Ozmosis mod for it)
CPU E3-1270
GPU GTX1050TI
SSD LITEON T10 NVME 240G

The first stage of installation is very normal like I used to install 10.12.But after this,there is no new mac partition built.
In the fisrt stage,I erased my SSD as APFS.
Is this the source of the problem?
But I tried HFS,it turns out to be useless.

Plus,I deleted the kernextpatcher in the Ozmosis for inserting a file into the BIOS to make my NVME SSD work on the old motherboard.

I'd be appreciate if this problem solved!
Thanks for all of you!
