Erledigt Nvidia Driver in High Sierra

Beitrag von „mitchde" vom 30. September 2017, 19:08

Do you mean an message "Some error happen ..."?
Thats because SIP disabled - but doesnt matter. And this is new in the installer since HS - before the installer doesnt check SIP enabled (safe, default) or not. If HS installer detect SIP diabled this "error" message pops up - forget it.
Let the installer make his work after the message.Do not abort the install.
All drivers are installed to /L/E and not /S/L/E anymore like Sierra and before!!!

And to use Web driver you must have nvdrv NVRAM variable set (normally done with Clover setting webdriver true)
