## **Dual system startup WINDOWS / OSX startup entry problem**

**Beitrag von „luoliqing“ vom 14. Oktober 2017, 18:43**

I have a multi-hard disk configuration (in Gigabyte G1.Sniper M5), a more specific win10 UEFI disk and a UEFI Sierra disk with ozmosis boot loader. Reboot my Sierra I get another boot entry that needs to reset NVRAM just a short solution,

There will also be blank start entries.

If you know, please help me, thank you
