Dual system startup WINDOWS / OSX startup entry problem

Beitrag von „al6042“ vom 14. Oktober 2017, 18:56

Hi there...

is it Sierra (10.12.x) oder High Sierra (10.13.x)?

With High Sierra there is this issue that Ozmosis is not able to find the APFS-based Disk by itself.

There seem to be a couple of Shell-commands which might help you in that case...

But I'm not able to help with them, since I don't use Ozmosis.
