PJALM websites account suspended

Beitrag von „cehos“ vom 15. Oktober 2017, 11:49

Thank you so much al6042 ... 😊

I put file from link to Preferences folder but it doesn't work because I used direct url address to PJALM websites (for example <http://pjalm.com/repos/intel9>). So I have to go to org.rehabman.github.MacASLv1.31.plist file and I find right link address in sources and fix url in Preferences in MACiASL: <http://maciasl.sourceforge.net/pjalm/repos/intel9> and viola it works. I write it only for other people which have same problem.
