Galaxy Book 12 El Capitan on Oled device

Beitrag von „al6042“ vom 19. Oktober 2017, 21:50

In that case the inject was not successful...

In regards to your information about other attempts, it might be possible some of these still have kexts lingering around...

You should check that in the System Information, segment "Software"->"Extensions".

When the list of Extensions is created, click on the column "Obtained from" two times, so the list is sorted and beginning with "Unknown" or "Not signed".

Create a screenshot from those Kexts and post it as an attachment.
