## **High Sierra 10.13 - Installations Problem(e) ; Gigabyte X299 UD4 - i7-7800X - GeForce® GTX™ 1080 Ti**

**Beitrag von „DanyH83“ vom 23. Oktober 2017, 13:23**

Hello .I 've this configuration on my new desktop ( X299 Arous gaming 9 + 7820x + 1080TI). i create now the usb with the terminal and now i must proced with clover install.

My question is:

- 1) in clover what do i select in DRIVER64UEFI?
- 2) did i use a particular kext to add in the EFI partition of the usb stick?
- 3) for AIO systems (CORSAIR H115i) there are some kext particulars to install?

Thanks.
