Hilfe bei Install: X299 | i7-7820X | GTX1080 -> Sierra 10.12.

Beitrag von „DanyH83“ vom 23. Oktober 2017, 13:57

Hello drnoodle. Sorry but i have read that you have a similar configuration of my new desktop (X299 Arous gaming 9 + 7820x + 1080TI). i create now the usb with the terminal and now i must proced with clover instal.My question is:

1) i haven't a config.plist is a problem?

2) in clover what do i select in DRIVER64UEFI?

3) did u use a partivular kekt to add in the EFI partition of the usb stick?

4) for the AIO cooler (corsair h115i) how do I have to behave? is there something like Corsairlink for windows?

5)Can you post me your clover setup?

Thanks.
