I dont use Wifi and audio doesnt work for me either, but if you try:

- Applehda.kext
- Lilu,kext

If your chip is Alc1220 try to "inject" 11 (or 1 / 5 / 7) and you need a working dsdt. But atm there is none. And check the ALC thread...

I use my yamaha audio interface, works out of the box.

I was able to run realtek audio ALC1220 😊

I try to search a kext for the Qualcomm Atheros Killer wireless AC 1535 kext
