Thanks for sharing and good to see you over here [@alanlcarlos!](#)

I created a folder with a compressed FFS Version of your Theme, that gets recognized as a Freeform and not a DXE Driver in ROM. This way you don't get an error when you add it to your ROM via UEFITool.

I added the folder with your Theme to the first post of this thread, I hope that's ok for you! I think it looks amazing since it's so clean and basic. Good job! 👍
