AppleALC kext patch request

Beitrag von „grt“ vom 11. November 2017, 12:15

[@parrhesia](#) i have the same codec and also problems to get it working with AppleALC (for now i use a VoodooHDA.kext, works, but i dont like it 😊)
i tried to build my own AppleALC and i tried to patch the original HDA with the data from the codecdump - both without success -

and here i thought, it would be easier for helpers, to download the textdocument from the dump than to copy this long text from the posting..
