Do you have more than one HDD/SSD in your System?

If so, check if they have an /EFI/Oz-Folder in their EFI-Partition...

Normally the drive which is connected to the first SATA-Port (SATA3 Port 0) gets those entries...

By the way: please add your Hardware-Details from your first post either in your Signature or your Profile, in the section "About me", so anybody can relate to your situation without having to search those infos in your opening post...
