## Updating from Yosemite - Computer frozen

**Beitrag von „al6042“ vom 13. November 2017, 16:53**

In that case use the Ozmosis-Shell (Gear-Symbol in OZM Startmenu) and use the following commands:

Code

1. map

to find all the available partitions

Code

1. fsX:

to connect to the available partitions, the "X" outlines the numbers between 0 to 9

Use the `ls`-command in every partition to find the correct EFI-partition.

With `cd \EFI\Oz\Acpi\load` you are able to switch the directory...

ATTENTION 1: use the "\" as separator in the Shell

If your in the directory which contains the DSDT.aml-file use the following command to:

1. rename the file

Code

1. `mv DSDT.aml DSDT,aml.bak`

2. or remove the file

Code

1. `rm DSDT.aml`

ATTENTION 2: the keyboard layout in the shell is english, in that case you have to be aware that some of the necessary keys are switched, e.g. : and \

Good luck...
