Problems with AppleALC (alc262) for sierra

Beitrag von „witjojo“ vom 14. November 2017, 16:50

The lilu.kext is already installed.

I think the PinConfig is not entirely correct.

I read something about the the Platforms.xml.zlib and layout.xml.zlib which are responsible for it.

But my knowledge is too low to rebuild it. Could someone create the right AppleALC.kext for me?

Attached are the data for alc262. The sources are here: <https://github.com/vit9696/AppleALC>
