## AppleALC kext patch request

Beitrag von „grt“ vom 16. November 2017, 23:38

[Zitat von MacPeet](#)

Codec is added in next release:

fuji dankt!

[@parrhesia](#) please try the appleALC and lilu kext's which macPeet provided - the second one. if you use a dsdt, enter the patch above in my post -> layoutID 12 (0x0C) to device HDEF - if there is no HDEF, look for HDAS, and rename it to HDEF (i think there exist a patch in some repository of rehabman for renaming).

if you dont use a dsdt, check fixHDA and enter layoutID 12 in clover.

in both cases remove all voodooHDA and disabler kexts and be sure, that you have a original untouched appleHDA.kext in your system.

your codec is the same as mine, your board has two jacks (green/blue) like mine, so the appleALC, that works for my board should work for yours too.
