macOS Sierra and High Sierra - Gigabyte GA-X99-Ultra Gaming i7-6850K

Beitrag von „sirbrem“ vom 17. November 2017, 18:38

Did you have to reinstall the NVIDIA drivers after installing High Sierra? It looks like you are using NvidiaGraphicsFixup.kext now instead of using the AGDPfix, correct?

Does installing High Sierra attempt to overwrite the EFI partition, or can I simply run the installer?

Also, is the HackrNVMeFamily.kext still needed? I heard High Sierra was supposed to have better native NVMe support.

Any tips for the update process?
