Kein Firewire-Connect nach Sleep

Beitrag von „Tommisan“ vom 19. November 2017, 22:50

das sind die PCIs

um beste performance zu erhalten müsste die FW Karte in den PCIEX4 Slot....

Oder aber ich drücke die Nvidia in den 8er Slot und habe damit den 2. PCIEX1 Slot für die FW Karte frei.

richtig?

1 x PCI Express x16 slot, running at x16 (PCIEX16)

* For optimum performance, if only one PCI Express graphics card is to be installed, be sure to install it in the PCIEX16 slot.

1 x PCI Express x16 slot, running at x8 (PCIEX8)

* The PCIEX8 slot shares bandwidth with the PCIEX16 slot. When the PCIEX8 slot is populated, the PCIEX16 slot will operate at up to x8 mode.

1 x PCI Express x16 slot, running at x4 (PCIEX4)

* The PCIEX4 slot shares bandwidth with the PCIEX1_2 slot. When the PCIEX1_2 slot is populated, the PCIEX4 slot will operate at up to x1 mode.

2 x PCI Express x1 slots

(All of the PCI Express slots conform to PCI Express 3.0 standard.)

2 x PCI slots
