

Erledigt

Sleep->Wake = Crash bzw. Reboot

Beitrag von „enjoylinus“ vom 21. November 2017, 16:43

Gerade ist es wieder passiert, aus dem Nichts!!!

Über mehr oder weniger genau 24h konnte ich den Rechner ohne Problem aufwecken.

Jetzt gerade, 'baff', Absturz/Strom weg und quasi zwei Mal Reset. Ich habe absolut nichts verändert.

Ich habe dann aber sogleich die Konsole nach Wake Eintragungen durchsucht und Folgendes gefunden:

Zitat

```
standard 16:21:41.273710 +0100 kernel process SGDawNodeService[563] caught waking the CPU 45369 times over ~54 seconds, averaging 825 wakes / second and violating a limit of 45000 wakes over 300 seconds.
```

```
standard 16:21:41.274075 +0100 symptomsd Received CPU wakes trigger: SGDawNodeService[563] () woke the CPU 45369 times over 54.97 seconds (average 825/sec), violating a CPU wakes limit of 45000 over 300 seconds.
```

```
