Shutdown Problem Sierra

Beitrag von „kocko“ vom 7. Dezember 2017, 17:22

I have a similar problem when I turn off my PC through Windows - it does not turn on with my mouse. If you turn it off via MAC, then when you shut it down, move your mouse or touch the keyboard to turn it on. FixShutdown is labeled, the BIOS error will not be, because when shutting down Windows, the PC does not turn on the mouse. I'm giving Config.plist - please help.
