Erledigt **High Sierra bluetooth fix for magic mouse 2 and magic key pad**

Beitrag von „nrchandar0100" vom 23. Dezember 2017, 02:39

Hi,
recently i purchased magic numeric key pad and magic mouse 2 for my hackintosh.I run high sierra on my system.when i tried to connect them via usb bluetooth dongle (bluetooth terabyte usb 2) it shows both mouse and key pad are connected but they are not working, both mouse and key pad are deducted by the system in bluetooth preference. but under network in preference the bluetooth shows as bluetooth pan not connected. i installed some bluetooth fix which i downloaded long back and it is for 10.10.5. this fix contains IOBluetooth family.kext and IObluetooth hiddriver.kext and Apple bluetooth multi touch.kext and apple multi touch driver.kext.after installing this by kext installer only my bluetooth is getting deducted. my system is GA Z97 mother board with 4th gen core i 3 processer with 18 gb ram and nvidia 210 graphis. kindly help me i invested reasonable money to buy mouse and keypad .guide me how to solve the problem and any latest bluetooth kext is available please provide me.

Thanks and regards
