

## **Erledigt** apfs boot log deaktivieren

**Beitrag von „Banduri1984“ vom 27. Dezember 2017, 14:48**

Hi Leute

Ich habe auf einer bakannten Seite diese Anleitung gefunden:

When using APFS.efi with Clover some early logging generated by APFS.efi will show during the boot sequence.

Due to copyright reasons and potential forum rules breach, this only contains patching instructions for your local APFS.efi.

APFS.efi was updated in the High Sierra 10.13.1 update.

MD5 checksum of the 10.13.1 /usr/standalone/i386/APFS.efi is:  
c4f1aed703d099c4cd84b25cc9ff7b18

In order to quiet the APFS.efi logging, patch the following in Hex Fiend:

Offset 0x2227e -> 0x55 to 0xC3

MD5 checksum after patching APFS.efi is: bbdfcc6e4998401aa942b93992a7282e

Place the modified APFS.efi in your /CLOVER/drivers64UEFI folder

**Könnte jemand die Schritte in der App erklären?**

Gruss
