

Quicksync, Virtual-Screen Abstürze und iGPU+ded. GPU mit Grafikbeschleunigung

Beitrag von „henties“ vom 1. Januar 2018, 20:55

Habe folgendes in diesen Forum pulbliziert:

<http://www.insanelymac.com/forum/topic/page-9#entry2559580> post #175

In my quest to enable Hardware encoding as well as mirroring on both of my hacks, one a Skylake and the other a Haswell build, I needed to to remove Lilu.kext as well as NvidiaFixup.kext (both at version 1.2.1) and revert back to AGDP.fix to fix the black screen issue during boot.

Details have been published here:

[Quicksync, Virtual-Screen Abstürze und iGPU+ded. GPU mit Grafikbeschleunigung](#) at post #394.

Greetings
