asus h81m-plus ozmosisi boot abfs

Beitrag von „mosca3“ vom 6. Januar 2018, 12:07

hello I added the hardware to my profile.

So I installed high sierra on a new ssd formatted in apfs no hfs +,
the rom of my bios is this <https://www.hackintosh-inc.de/...M-PLUS-ASUS-2205-CAP-zip/>

I only changed the horizontal theme with a lighter one to insert apfs.ffs in the bios.

these are the photos of the boot and the efi folder on the disk where high sierra is installed in apfs.
